

SAHIL SHITOLE

Applied AI Engineer | Backend Software Engineer | Python | FastAPI | Java | Spring Boot | LLM Integration

Pune, Maharashtra, India | +91-7620919774 | sahilshitole1483@gmail.com | linkedin.com/in/sahil-shitole | github.com/Sms1818

Technical Skills

Languages: Python, Java, SQL

Applied AI & LLM: LLM-Powered Assistants, Retrieval-Augmented Generation (RAG), LangChain, Pinecone, Prompt Engineering, Semantic Search

Backend & Frameworks: FastAPI, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate

Architecture & Integration: REST API Design, Third-Party API Integration, Microservices, Event-Driven Architecture, Asynchronous Processing, OOP, JWT Authentication

Databases & Messaging: PostgreSQL, MySQL, SQL Server, Apache Kafka (project experience), Pinecone (Vector DB)

DevOps & Tools: Git, GitHub Actions, Docker, Kubernetes (fundamentals), DigitalOcean, Linux, systemd, Webhook Automation

Professional Experience

Neopart Transit LLC (via Blue Ocean Global) — Software Engineer, Backend & Applied AI Automation

Official designation: Data Analyst (Blue Ocean Global)

Jan 2025 – May 2026

AI-Powered AR Automation

- Built an internal LLM-powered assistant integrating Quickbase, QuickBooks, and OptimoRoute APIs, giving the AR team a conversational interface to retrieve customer and invoice details, review payment history, send invoices, log interactions, and schedule or unschedule field visits.
- Designed a rule-based escalation engine for 50+ customer accounts, automating billing-term-specific follow-ups, overdue-invoice tracking, payment-commitment monitoring, and email and field-visit escalations, replacing fragmented manual follow-ups with a consistent workflow.

Customer Portal & Backend Tooling

- Co-engineered a B2B customer portal using Java and Spring Boot with RESTful API architecture, integrating Quickbase (work-order creation, customer tracking) and OptimoRoute (driver assignment, real-time ETA visibility) with customer-specific pricing logic and cart-based ordering.
- Built Python/FastAPI/Streamlit applications for AR and AP statement distribution, splitting consolidated PDFs by customer or vendor, enabling individual and ZIP downloads, and automating personalized bulk emails via SMTP; also built an AP remittance tool to group Excel records by vendor and preview row counts and email content before sending.
- Managed deployment automation for internal applications on DigitalOcean Droplets, using systemd services for recovery after failures and reboots, and building a GitHub-signature-verified webhook listener to trigger deployments on code pushes; used GitHub Actions to schedule recurring Python jobs.

Projects

SupportSync – AI-Powered Support Ticketing Backend

Python, FastAPI, LangChain, MySQL, Pinecone Vector DB, Docker

- Built a FastAPI backend integrating Jira, ClickUp, and Salesforce to centralize ticket management and generate AI-assisted resolution suggestions for support agents.
- Implemented semantic retrieval with LangChain and Pinecone to surface relevant historical tickets, providing context for new support requests.
- Built a full-stack AI chatbot with document-attachment support and containerized the application with Docker.

PRSense – Event-Driven AI Code Review Platform

Java, Spring Boot, Apache Kafka, PostgreSQL, Gemini AI, Docker, Kubernetes

- Built a Java 21/Spring Boot platform that analyzes Bitbucket pull-request diffs using JGit and Gemini 2.5 Flash, generating structured AI-assisted code-review feedback as pull-request comments.
- Designed a three-service asynchronous pipeline using Bitbucket webhooks/APIs and Kafka to process review events and persist data in PostgreSQL.
- Containerized services with Docker and Kubernetes, using Kubernetes Secrets, SSH-based repository cloning, and retry/timeout handling for automated reviews.

Education

Bachelor of Technology – Computer Science Engineering

2021 – 2025

Vishwakarma Institute of Technology, Pune | CGPA: 8.71/10.0 | DSA, DBMS, OS, Computer Networks, OOP
